

FastAPI Backend Architecture & Folder Structure

Yeh document aapke backend project ke folders aur unke kirdar ki wazahat karta hai.

1. api/ (ya routers/)

Yeh aapka entry point hai jo client/frontend se HTTP requests (GET, POST, PUT, DELETE) receive karta hai aur routers ke zariye endpoints handle karta hai.

2. schemas/

Yeh Pydantic models ki jagah hai jo data validation, request payloads, aur response formatting ke liye use hote hain.

3. models/

Yeh database ke tables ya ODM/ORM documents ke sath interact karne aur data ko database mein store karne ke liye hota hai.

4. services/

Yeh application ka Business Logic layer hai jahan saari main calculations, rules, aur permission checks perform hote hain.

5. migration/

Database changes aur schema updates ko track aur manage karne ke liye (jaise Alembic migrations).

6. core/

Project ki core configurations, environment variables, security/JWT settings, aur global roles/permissions ki definitions.
